

## Mathematics

## What are the aims and intentions of this curriculum?

The aim of our Key Stage 4 Curriculum is to enable students to:

- Develop fluent knowledge, skills and understanding of mathematical methods and concepts
- To make the connection with the KS3 curriculum
- Acquire, select and apply mathematical techniques to solve problems
- Reason mathematically, make deductions and inferences and draw conclusions
- Comprehend, interpret and communicate mathematical information in a variety of forms appropriate to the information and context.
- To provide students with a holistic experience, prepare them for future success, help them aspire and value mathematics, Personal Social Health and Economic (PSHE) education and Careers Education (CE) are incorporated into the curriculum.

Year 11(B)

**Throughout KS4:** Students will need to keep working on key skills as they occur within other topics, as well as when the skills are being explicitly addressed. These include: Addition, subtraction, multiplication and division; order of operations; fractions, decimals and percentages; rounding and estimation; and algebraic notation.

| Term                                                                                                                                                                      | Topics                                                                                                                                               | Knowledge and key terms                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Skills developed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Assessment                                                                                                                                                                                                                                                                                     |

- Direct and Inverse Proportion
- Graphs of cubic, quadratic- identify turning points

• Linear Inequality, solving and Regions

 Pythagoras and Trigonometry

• Area and Arc length of

• Revisit Handling data

and **Probability** 

sectors.

## Students will be able to:

- Interpret mathematical relationships both algebraically and graphically e.g. direct and inverse proportion and real-life graphs.
- Sketch quadratic and cubic functions. Know where a graph will cross the x-axis
- Understand maximum and minimum points. Engineers, Physicist, Astronomy
- Express solutions to inequalities using set notation
- Solve several inequalities in two variables, representing the solution set on a graph
- Understand, recall and use Pythagoras theorem in 2D and **3D shapes.**

Speed limits, number of persons in the elevators, grade boundaries, who can take a given medication, age limit – travel for free, eat a hotel free, TV license free for > 80 years old etc

- Understand, use and recall the trigonometric ratios sine, cosine and tan and apply them to find angles and lengths.
- Know the exact values of Sin, Cos and tan 0, 30, 45, 60 and 90.
- Know and apply the sine rule and cosine rule to find unknown lengths and angles and trigonometric area to calculate the sides and angles of any triangle given the areas.
   Construction, Aviation, Engineering and Product Design

 Calculate arc lengths, angles and areas of sectors of circles
 Space Scientist, Aeronautical Engineers

## Averages including Histograms, Tree diagrams and Venn diagrams to find probability.

• To be able to find the measures of location and measures of spread including CF

calculate and interpret conditional probabilities through representation using expected frequencies with two-way tables, tree diagrams and Venn diagrams.

- Develop their mathematical knowledge, in part through solving problems and evaluating the outcomes, including multi-step problems.
- Make and use connections between different parts of mathematics to solve problems.
- Model situations mathematically and express the results using a range of formal mathematical representations, reflecting on how their solutions may have been affected by any modelling assumptions.
- Select appropriate concepts, methods and techniques to apply to unfamiliar and non-routine problems; interpret their solution in the context of the given problem.
- Apply Pythagoras' theorem to problems in three dimensions, including repeated use of the theorem e.g. in finding the length of the diagonal of a cuboid
- Identify right-angled triangles in three-dimensional shapes and use trigonometry to find missing sides and angles.

• A sector is a fraction of 360° of the entire circle.

• Understand and use standard mathematical formulae; rearrange formulae to change the subject
